- Javascript,
- Angular,
- Ionic, etc.

### Responsibilities:

- Built a Content Management System (CMS) and a Customer Relationship Management (CRM) web app. Using core PHP I was able to build a mini framework using all the standards of a PHP MVC framework.

## Portfolio

## Marketing tool

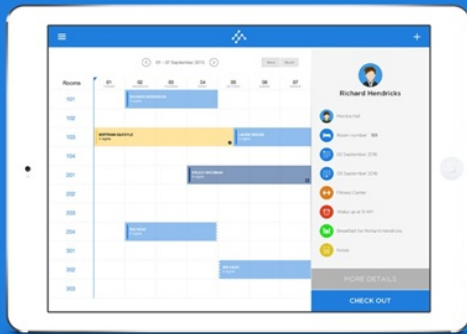

June 2019 - December 2019

It's a marketing tool to speed up your search and spy competitors. I worked on this as the lead of technical stuff implementing some modules like funnels finder, newsletter catcher, funnels library etc.

### Technologies used:

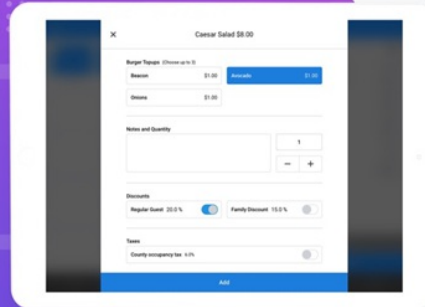

Node.js, Laravel, Vue.js, AWS

Manage your hotel bookings and reception on your fingertips.

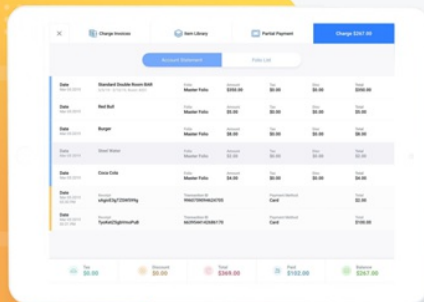

## MODIFIERS

Apply modifiers for custom options and add-ons.

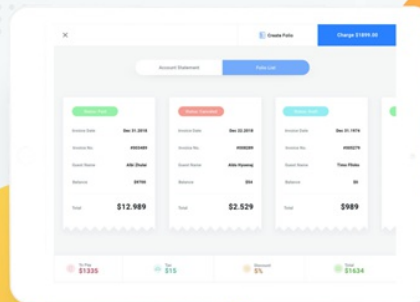

## ACCOUNT STATEMENT

A detailed summary of your guests' activity.

## FOLIOS

Manage multiple folios simultaneously.

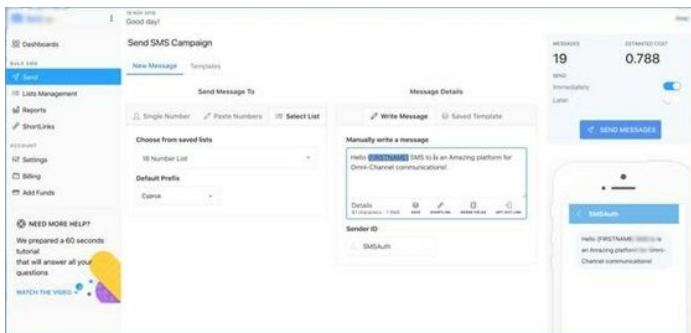

## Hotel operations app

February 2019 - March 2020

This is a complete suite of products to manage a hotel's operations. There are different kinds of products like Reception, Booking Engine, Channel Manager, HouseKeeping, Cashier POS, Scheduling etc. In this project I worked as a back-end engineer and was able to implement different methodologies to organize better and to improve the quality of back-end stuff. I was able to create different packages and apply design patterns on some of the most core microservices used on all the applications as the main endpoint.

Technologies used:

PHP, Laravel

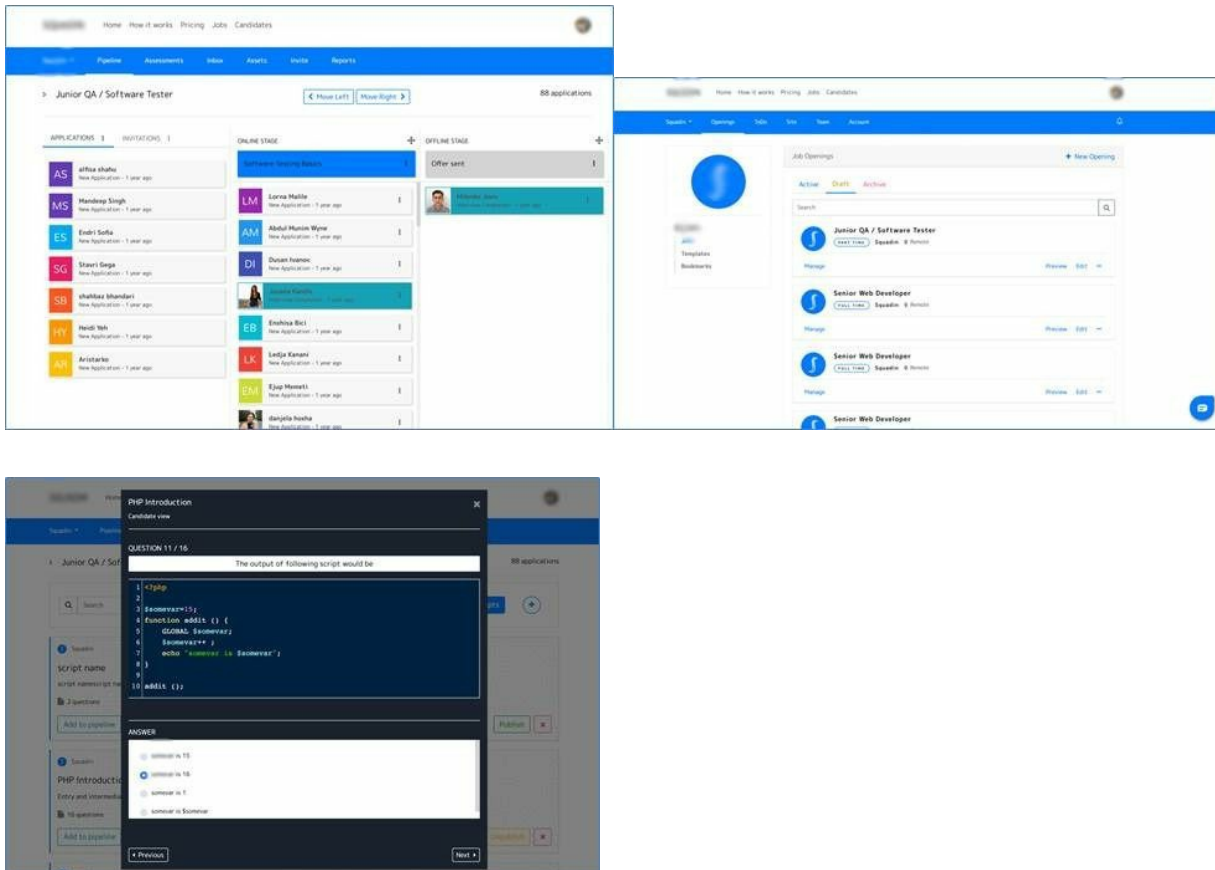

## Messaging app

### September 2018 - May 2019

It is a smarter way for businesses to communicate with customers through multiple channels SMS, WhatsApp, Viber etc. I worked as a web developer both on the front-end and back-end side. It was a great application to learn how to perform when you have to do with too much data and communications over API. Needed to send over 1 million SMS via API and I had to find a way to do that in the most performant and optimized way and we did it.

Technologies used:  
PHP, Laravel, Vue.js, MongoDB

## Tracking system app

### January 2018 - December 2019

I worked on this project for 2 years and I was the responsible for all the technical stuff there, managing a small technical team. It is an application tracking system which recruiters can organize and automate their daily work process. I have been able to use all the modern methodologies to write a high quality code and to integrate with different platforms like Stripe, Paypal, Facebook, LinkedIn, Digital Ocean etc.

Technologies used:  
PHP, Laravel, Vue.js, HTML, CSS
