Application developer, Software Engineer

Portfolio

IT Services and IT Consulting Company
March 2020 - October 2021

I worked in the first construction management platform, where the entire project team – from

workers, foremen, contractors, and project managers – come together to collaborate and coordinate job sites according to a real-time time tracking and cost control. It is an ERP project and I worked as a frontend developer and supervisor. We were 10 and did the project from scratch.

I was supposed to implement the UI (working with charts, sso etc.). I implemented and created a new gantt chart. Beside I supervise and lead the frontend team. I was the React developer.

Technologies used:

Javascript, React
