Computer and Network Security Company
Full Stack Engineer

Stack:

- Elastic Stack (Elasticsearch, Filebeat, Logstash, Kibana),
- Docker,
- Python,
- PHP,
- Laravel,

- Django,
- Django Rest Framework,
- Celery,
- Redis,
- MySQL.

Responsibilities:

- Working on a cloud-agent project behind NAT. The app works on the user computer as an agent and serves information to firewall cloud app. Some parts of the old app converted from Python to Golang in this new app;
- Working on a project which manages firewall operations. The app serves a UI (Angular) to manage recategorization and some private firewall related jobs. An extra, it processes logs everyday and detects anomalies through Elastic Stack. This was a bit of a conversion from PHP (Laravel) to Python (Django). The API part was written with Django Rest Framework.

April 2020 -
December 2021

Software Development Company
Backend Developer

Stack:

- Python,
- Django,
- Django Rest Framework,
- Celery,
- Redis,
