- Work on an engine that will convert RDBMS data into a Graph DB;
- Develop a single-page web application that uses react and local storage;
- Make front-end improvements and bug fixes in the Graph project.

## Cryptocurrency Tracker

### June 2020 - December 2020

**Description:** This was a solo project where I developed an application to track Cryptocurrency prices and get live market data about the currencies the user chooses to track.

**Role:** All was developed by me. I created a nice-looking UI that works on all different screen sizes and also I developed a notification system that the user can easily modify and thus easily receive information on their favorite currencies. This app was published on Google Play.

Technologies used:  
Angular, Node.js, MongoDB

## Admin dashboard for a Brainquire

October 2017 - June 2018

**Description:** We created and published a game for cognitive skill enhancement and mental development which is downloaded more than 100.000 times

**Role:** I was a Full stack and Mobile Developer in this project. I created an admin dashboard for the Android game "Brainquire" from scratch. Also, I developed new features for the game in a team of 6 people. The UI of the admin dashboard app was fully created by me. I also contributed to the mobile game and added new mini-games and tutorials to it.

Technologies used:

Javascript, Node.js, React, React Native, Express.js
