

Curriculum vitae

Personal data

Name: Viktor S.

Technical Knowledge and Skills

Javascript, CSS, React, Node.js

Viktor is an experienced JavaScript developer, currently focused on building applications with React. I have a perfect knowledge of JavaScript and all its latest standards.

Education

September 2008 —
May 2013

Brèst, Belarus
Bachelor's Degree, Brest State Technical University.

Work experience

September 2019 -
October 2020

Esports data & technology services, Remote
Frontend Developer

- Development of cybersport related applications for streamers and gamers
- Using React as a frontend library for creating UI
- Using Redux, Redux Saga for state management
- Refactor existing application to latest version of React
- Custom server-side rendering implementation with Node, Express, Socket.io

March 2018 -
September 2019

Apparel & Fashion
Frontend Developer

- Creating e-commerce SPA's with Javascript and Typescript
- Using React and Vue as frontend libraries for creating UI
- Using Next.js and Nuxt.js for server-side rendering
- Using Mobx and Vuex to store data
- Unit testing with Jest and Enzyme
- Collaborate with backend developers on JSON API design
- Working closely with the application architect, design and QA teams
- Code review

October 2017 -
February 2018

Internet, Remote
Frontend Developer

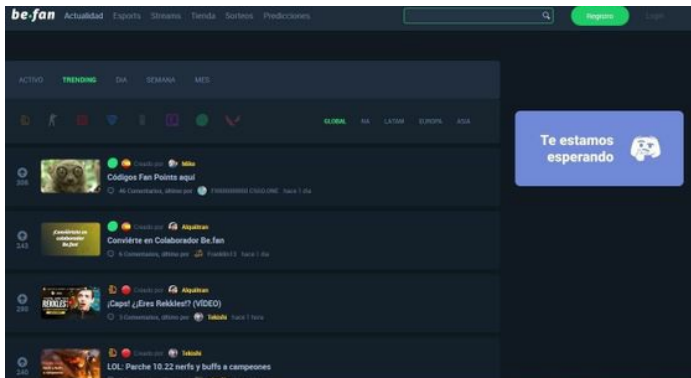

- Creating SPA's with React
- Using Redux as data storage
- Unit testing
- e2e testing
- Translating designs into markup

May 2017 -
October 2017

Professional web-/mobile IT development, Remote
Frontend Developer

- Responsible for frontend application development and UI implementation
- Construct a powerful and modern frontend, involving React, and ES6
- Building reusable components for future use
- Using Redux to store data from multiple API endpoints
- Translating designs and wireframes into high quality code
- Building websites with jQuery

Portfolio

News portal/Esports September 2019 - October 2020

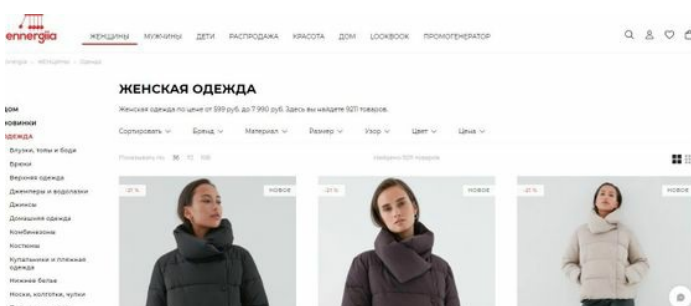

I was responsible for building modern UI with React. Took part on every aspect related to frontend development. Translated design to code. Built new functionality. Refactored old codebase.

Updated application to latest versions of React. Switched from Reflux to Redux.

Worked in close cooperation with other engineers. Discussed different ways to achieve goals. Proposed several modern technologies that were taken in use.

After updating UI and adding new functionality we achieved significant growth of users and increase in retention.

Technologies used:
Javascript, React

Online store/E-commerce

March 2018 - September 2019

Website: <https://www.ennergia.com/>

- Creating e-commerce SPA's with Javascript and Typescript
- Using React and Vue as frontend libraries for creating UI
- Using Next.js and Nuxt.js for server-side rendering
- Using Mobx and Vuex to store data
- Unit testing with Jest and Enzyme
- Collaborate with backend developers on JSON API design
- Working closely with the application architect, design and QA teams
- Code review

Achieved big growth of revenue in short period of time.

Technologies used:
React, Vue.js, Javascript, Python
